PROFESSIONAL SUMMARY

Data Scientist and Machine Learning professional with a strong foundation in Python, SQL, Statistics, Machine Learning, and Deep Learning. Skilled in data preprocessing, EDA, feature engineering, model development, evaluation, and optimization, with experience in NLP and Generative AI.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Data Science & Analytics: Pandas, NumPy, Exploratory Data Analysis (EDA), Data Cleaning, Data Preprocessing, Data Visualization, Statistical Analysis, Hypothesis Testing

Business Intelligence & Visualization: Power BI, Dashboard Development, Data Visualization, Reporting

Machine Learning: Scikit-learn, XGBoost, Supervised Learning, Unsupervised Learning, Regression, Classification, Clustering, Feature Engineering, Feature Selection, Model Training, Model Evaluation, Cross-Validation, Hyperparameter Tuning, Model Optimization

Deep Learning & AI: TensorFlow, PyTorch, Neural Networks, Deep Learning, Computer Vision, Natural Language Processing (NLP)

Generative AI & LLMs: Transformers, Large Language Models (LLMs), Prompt Engineering, Fine-Tuning, Retrieval-Augmented Generation (RAG), AI Agents, Generative AI

Libraries & Frameworks: OpenCV, NLTK, Matplotlib, Seaborn

APIs & Deployment: FastAPI, Flask, REST APIs, OpenAI API, Google Gemini API, Streamlit, Model Deployment

Databases: MySQL, PostgreSQL, MongoDB, SQLite

Development & Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code, Docker

PROJECTS

INVOICE INTELLIGENCE | Python, Pandas, SQL, Machine Learning | [GitHub](#) | [Deployed App](#)

- Built an ML-based invoice intelligence system trained on 5,000+ invoice records with two predictive models: Invoice Risk Classification and Freight Cost Regression.
- Developed a Random Forest Classifier using 8 invoice features to flag potentially risky invoices and evaluated 3 regression models to predict freight costs using Mean Absolute Error.
- Automated invoice risk assessment and freight cost estimation, enabling data-driven invoice review and decision-making.

Customer Churn Prediction | Python, Pandas, NumPy, Scikit-learn, Streamlit | [GitHub](#) | [Deployed App](#)

- Built a binary classification model trained on 10,000+ customer records to predict customers likely to churn and support retention decisions.
- Performed data cleaning, EDA, feature engineering, preprocessing, feature scaling, and model evaluation to develop a reliable churn prediction pipeline.
- Identified high-risk customers and key churn patterns from customer and account data, enabling targeted retention strategies and data-driven customer management.

Sentiment Analysis | Python, Pandas, Scikit-learn, NLP | [GitHub](#) | [Deployed App](#)

- Built an NLP-based sentiment analysis model using 16,000 labeled text records across multiple emotion categories.
- Applied Bag of Words (BoW) for text vectorization and preprocessing to convert text data into machine-learning features.
- Trained and evaluated classification models to automatically identify emotions from user-generated text.

EDUCATION

Master of Computer Applications (MCA AIML AIML) — Galgotias University | **CGPA: 7.82** | 2024–2026

Bachelor of Science (B.Sc.) — CCS University | **CGPA: 6.39** | 2021–2024

Intermediate (12th) — St. Aerjay Public School | **Score: 75.5%** | 2021

High School (10th) — St. Aerjay Public School | **Score: 82.6%** | 2019

CERTIFICATIONS & COURSES

- Data Analyst (Microsoft) [Certificate](#)
- Generative AI (GUVI HCL) [Certificate](#)
- Generative AI (Google Cloud) [Certificate](#)
